

~~The~~ 6 The Grizzly Bear

Life Style

The grizzly bear is 2-2.8m long. A male grizzly bear is so big it can weigh from 96-369kg. A female grizzly bear can weigh from 80-205kg. Their weight reflects their diet. A grizzly bear can weigh up to 30 years. Grizzly bears don't stick together. They eat: fruit, berries, tubers, nuts, insects, grubs, honey, fish, lizards, small/large mammals and carrion.

BEAR

The features of a grizzly bear

Thriving in Alaska and Canada, a grizzly cub measures only one-twenty-fifth of its mother's size. The grizzly bear has: a long and dense coat with silver-tipped hairs on its back and shoulders. Short but sturdy hind legs and broad flat paws (with five non-retracted claws). This loving bear - which has a brown shaggy coat - is called the grizzly bear because of its warm grizzly coat of fur.
