WALT write a non-chronological report.

Diet

When the Diplodocus had no teeth it had to swallow the food whole.

Appearance

The Diplodocus swished its tail back and forth this was done as a form of defence. The Diplodocus has a long neck so it can reach the branches on the trees because they eat the leaves.

FUN FACTS

Did you know a male Diplodocus goes on its back legs to embrace the female. A Diplodocus lived 65 million years ago. A Diplodocus lived in a herd so the adults could look after the babies.

Habitat

Some Diplodocus live in open forests with nearby streams. Diplodocus lived near rivers so they would have lots to drink. They lay their eggs so other Diplodocus can't dig or eat them.

Life Style

The Diplodocus grew really fast. If a Diplodocus is 20 years old it means it's an adult because it grows really fast so it doesn't have time to get bigger. When a Diplodocus laid its eggs it can take 3-6 months to hatch.
