

Fractions, Decimals and Percentage.

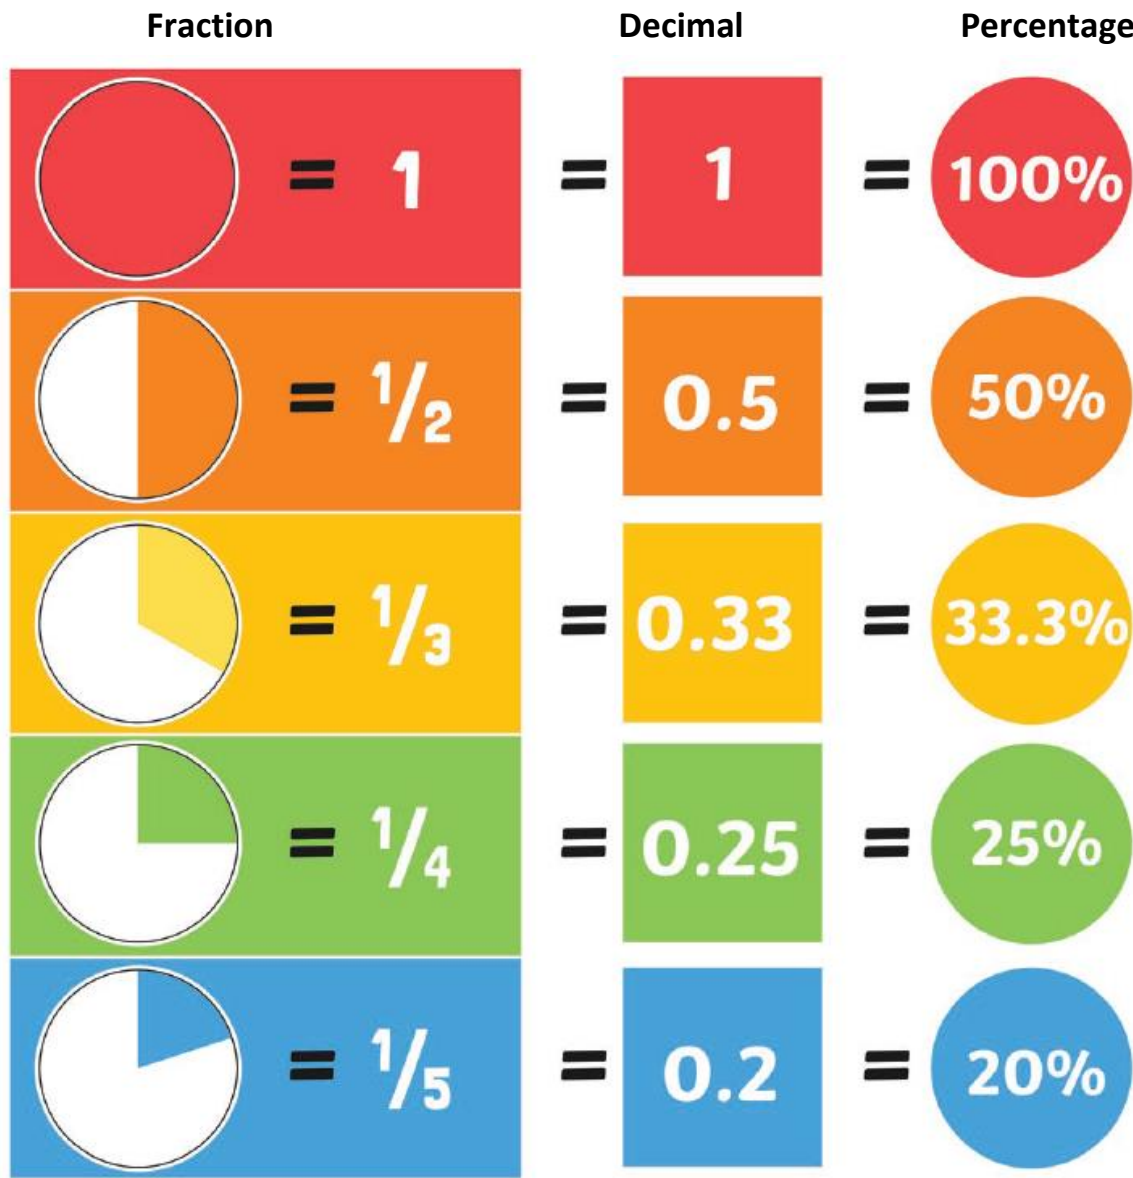

Advice and support:

Fractions, decimals and percentage are three different ways of representing “less than one”.

Fractions are represented as the part (numerator) over the whole (denominator).

Decimals represent the whole as “1” so less than one uses a decimal point.

Percentage is where the whole is represented by 100 and it uses this symbol: %

A video from the excellent “Khan Academy” uses visual representations to show how to display fractions, decimals and percentage:
